WEEK-11—Amazon LEX

Step 1: Open Amazon Lex

1. Login to AWS Console
2. Search **Amazon Lex**
3. Click **Create bot**

Step 2: Create Bot

1. Choose:
 - **Create a blank bot**
2. Enter:
 - Bot name: HotelBookingBot
3. IAM role → Create new role
4. Remaining default → next
5. Language: English
6. Voice (optional)
7. Click **Done**

Step 3: Create Intent

1. Go to **Intents**
2. Name: BookHotel
3. Click **Create**

Step 4: Add Sample Utterances

Add user sentences (how user talks):

I want to book a hotel

Book a room

Reserve hotel

I need a room

These are **Utterances**

Step 5: Create Slots (User Inputs)

Slots collect user information.

Add Slot

1. Click **Add slot**
2. Fill:
 - Slot name: age
 - Slot type: AMAZON.Number
 - Prompt: *Which city do you want?*

Mark as **Required**

Add IF Conditions (Conditional Logic)

Used to control flow based on slot values

Example Condition:

If {age} < 18

Steps:

1. Go to **Intent** → **Slots** → under **Advance options**
2. Scroll to **Slot capture: success response** → **Conditional branching**
3. Click **Add condition**

Example:

Condition:

If {age} < 18

Response:

Your not eligible for hoot booking?

Step 6: Create Slots (User Inputs)

Slots collect user information.

Add Slot

3. Click **Add slot**
4. Fill:
 - Slot name: location
 - Slot type: AMAZON.City
 - Prompt: *Which city do you want?*
5. Mark as **Required**

Repeat for other slots.

1. Click **Add slot**
2. Fill details:
 - **Slot name:** checkin
 - **Slot type:** AMAZON.Date
 - **Prompt:**
"What is your check-in date?"
3. Mark as **Required**
(Optional but recommended)
 - Add **Retry prompt:**
"Please provide a valid date (e.g., 2026-03-25)"
4. Click **Save**

Slot 7: Number of Nights (nights)

Steps:

1. Click **Add slot** again
2. Fill details:
 - **Slot name:** nights
 - **Slot type:** AMAZON.Number
 - **Prompt:**
"How many nights will you stay?"
3. Mark as **Required**
4. Click **Save**

Step 7: Create Custom Slot Type

Save intent

Click on Back to intents

If you want custom values:

1. Go to **Slot Types**
2. Click **Add slot type** -> **add blank slot type**
3. Name: RoomType

Add values:

Single

Double

Suite

Save slot type

Now use this in slot: go back to intent

- Slot name: RoomType
- Slot type: RoomType

Step 9: Add Response Cards (Card Groups)

Used for buttons (quick replies)

Steps:

1. Go to **slot prompts** -> **more prompt options**
2. Click **Add** -> **add card groups**

Example:

Card Title: Select Room Type

click on add Buttons:

- Single -> "Single"
- Double -> "Double"
- Suite -> "Suite"

Step 10: Configure Responses

Initial Response:

Welcome to Hotel Booking! What is your name?

Confirmation:

Do you want to confirm booking in {location} for {nights} nights?

The screenshot displays the Amazon Lex console interface for configuring an initial response. The left sidebar shows the 'Amazon Lex' header and a list of intents: 'BookHotel' (marked as 'Unsaved') and 'FallbackIntent'. The main content area is titled 'Initial response' and includes a text input field with the placeholder 'I want to book a flight' and an 'Add utterance' button. Below this, the 'Initial response' section is expanded, showing a 'Response to acknowledge the user's request' with the message 'Welcome to Hotel Booking! What is your name?'. This response is part of a 'Message group' which also includes 'Variations - optional' and 'Advanced options'. At the bottom, the 'Slots (5) - optional' section is visible, with an 'Add slot' button. The interface includes a top navigation bar with the AWS logo, a search bar, and a user profile. The bottom status bar shows the date and time as 'Sat Apr 4 11:54 AM'.

Step 11: Build & Test

1. Click **Build**
2. Use **Test chatbot** panel
3. Try:

Book a hotel

Amazon Lex console interface showing the configuration for a Slot type named RoomType. The breadcrumb navigation is Lex > Bots > Bot: HotelBook... > Versions > Version: DRAFT > All languages > Language: English (US) > Slot types > Slot type: RoomType. The interface includes a left sidebar with 'Slot types (1)' and a search bar. The main content area shows the 'Slot type: RoomType' configuration page with a 'Draft version' dropdown, 'English (US)' language selection, and a 'Not built' status. The page includes a 'Save Slot type' button and a 'Test' button. The 'Slot type details' section shows the slot type name and a description. The 'Slot value resolution' section shows the 'Expand values (default)' option selected. The 'Slot type values' section shows a list of values: Single, Double, and Suite, with an 'Add value' button.

Amazon Lex console interface showing the configuration for an Intent named BookHotel. The breadcrumb navigation is Lex > Bots > Bot: HotelBook... > Versions > Version: DRAFT > All languages > Language: English (US) > Intents > Intent: BookHotel. The interface includes a left sidebar with 'Back to intents list (2)' and a search bar. The main content area shows the 'Intent: BookHotel' configuration page with a 'Draft version' dropdown, 'English (US)' language selection, and a 'Successfully built' status. The page includes a 'Test Draft version' button and a 'Test' button. The 'Intent details' section shows the intent name and a description. The 'Contexts - optional' section shows input and output contexts. The 'Sample utterances' section shows a list of sample utterances and a 'Generate utterances' button. A 'Test Draft version' modal is open on the right, showing a chat interface with the text 'Welcome to Hotel Booking! What is your name?' and 'Which city do you want?'. The modal includes a 'Type a message' input field and a 'Save intent' button.

Sample output

User: Book a hotel

Bot: What is your age?

User: 25

Bot: Which city do you want?

User: Hyderabad

Bot: Check-in date?

User: Tomorrow

Bot: Number of nights?

User: 2

Bot: Select room type

User: Double

Bot: Do you want to confirm booking in Hyderabad for 2 nights?

User: Yes

Bot: Booking confirmed.

The screenshot displays the Amazon Lex console interface for a bot named 'HotelBookingBot'. The main area shows a visual flowchart (state machine) with various states and transitions. The bot is configured for English (US) and is currently in a 'Draft' version. A 'Test Draft version' window is open on the right, showing a simulated conversation:

- User: hotel
- Bot: Welcome to Hotel Booking! What is your name?
- User: Hyderabad
- Bot: Please tell me your check-in date (e.g., 2026-04-10)
- User: 2026-04-10
- Bot: How many nights will you stay
- User: 2

The bottom of the console shows the 'Visual builder' tab selected, and the bot is marked as 'Ready for complete testing'.
